

2010-2011 KTM Enduro 690 Z-Fi MX Installation Instructions
P/N F581

WARNING!

USE ONLY IN RACE OR OTHER CLOSED COURSE APPLICATIONS AND NEVER ON PUBLIC ROADS

Parts List:

Z-Fi MX Control Unit

Fuel Harness

Download Z-Fi Mapper Software & Its Instructions from Website

USB Cable

Large Cable Tie (1)

Small Cable Tie (8)

Stickers

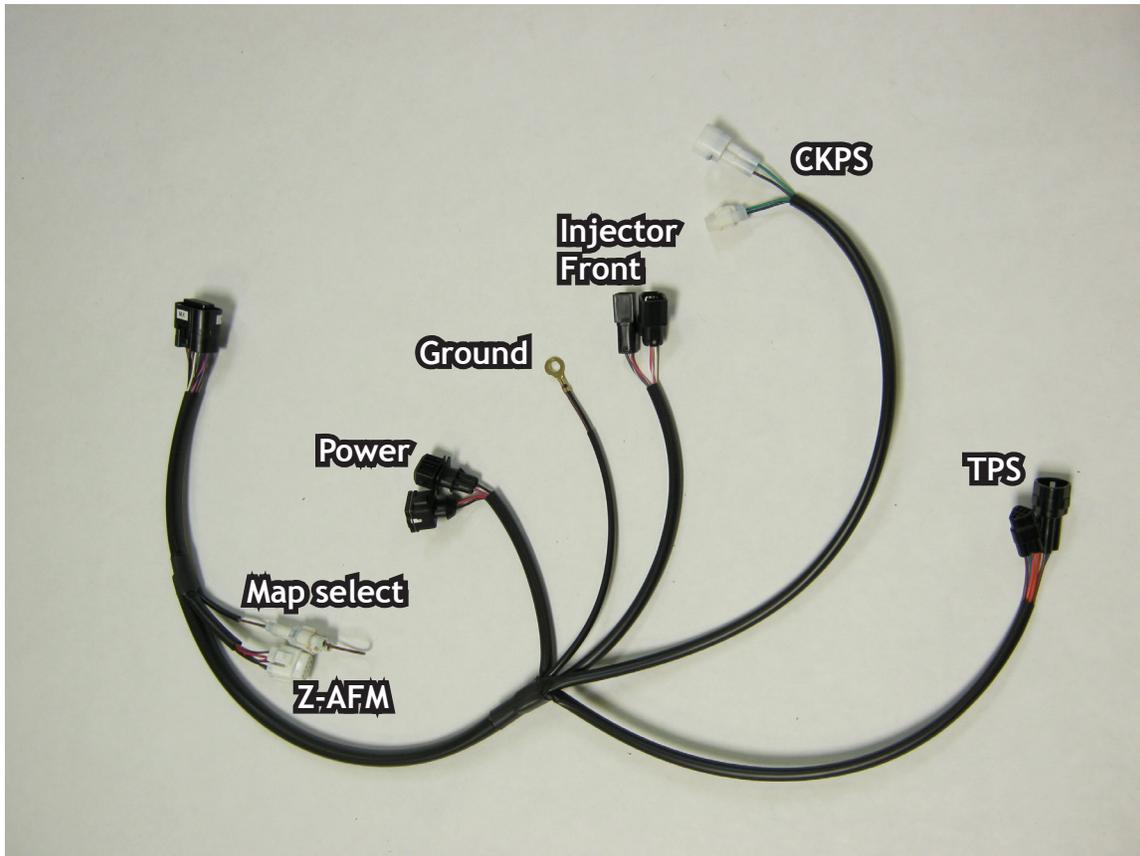

Read through all instructions before beginning installation. This is not a replacement for the ECU. This document is intended for use by qualified technicians. For more specific stock component identification and location information refer to a factory service manual.

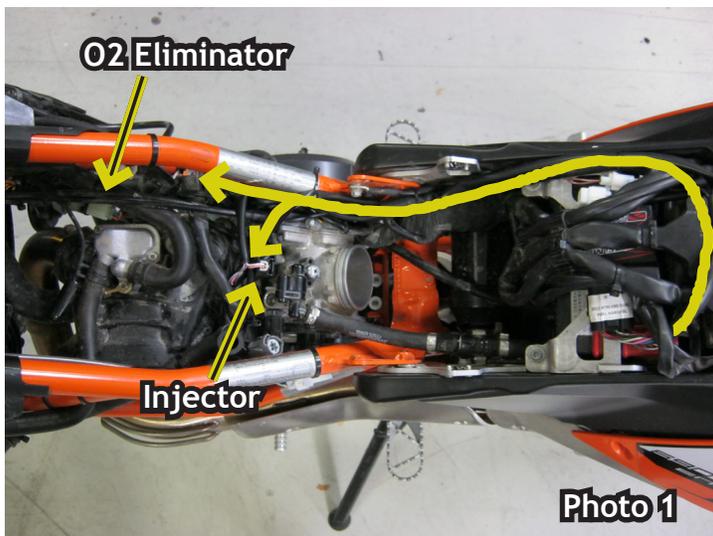

To create the ideal map(s) we recommend using the optimal Z-AFM self-tuning module

15330 Fairfield Ranch Rd., Unit E, Chino Hills, CA 91709 Phone (909) 597-8300 Fax (909)597-5580

BAZZAZ HARNESS CONNECTOR IDENTIFICATION

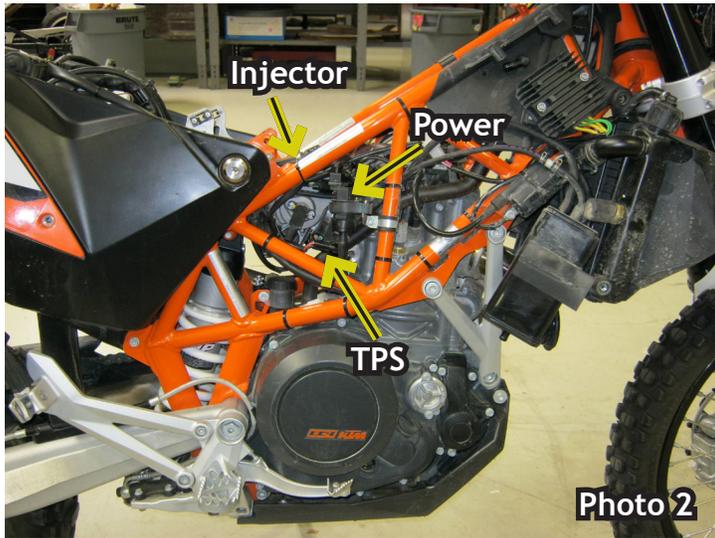

1. Remove the following components: seat, airbox and both side panels.
2. Use the supplied Velcro patch and long cable tie to secure the Z-FiMX control module to the top of the battery. Connect the Bazzaz harness to the control module and begin to route it on the right side the bike toward the engine (photo 1).

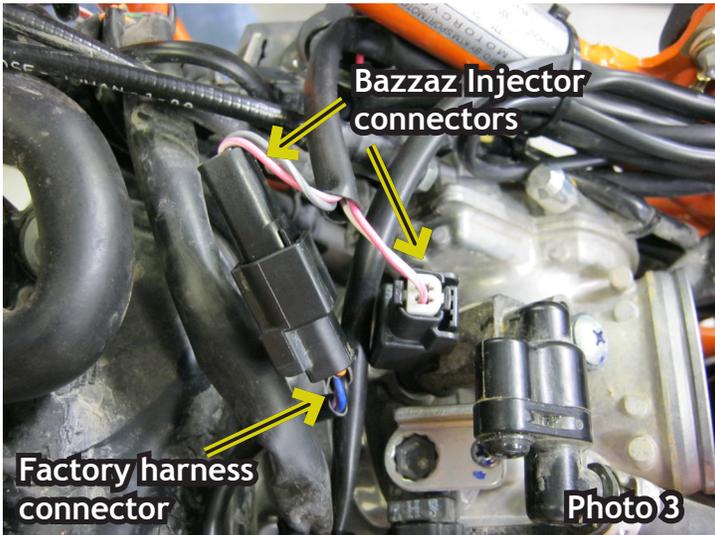

Bazzaz harness routing shown in yellow

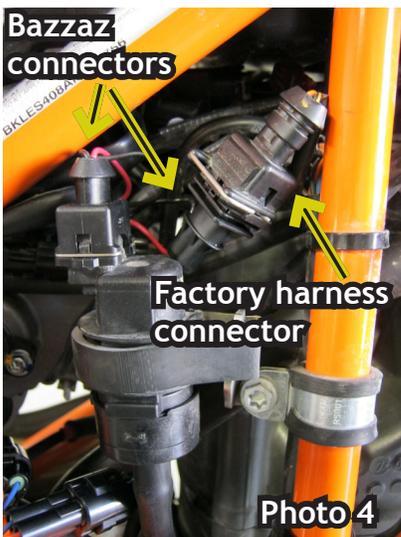

3. Photo (2) shows the location of the injector, power and throttle position connections.

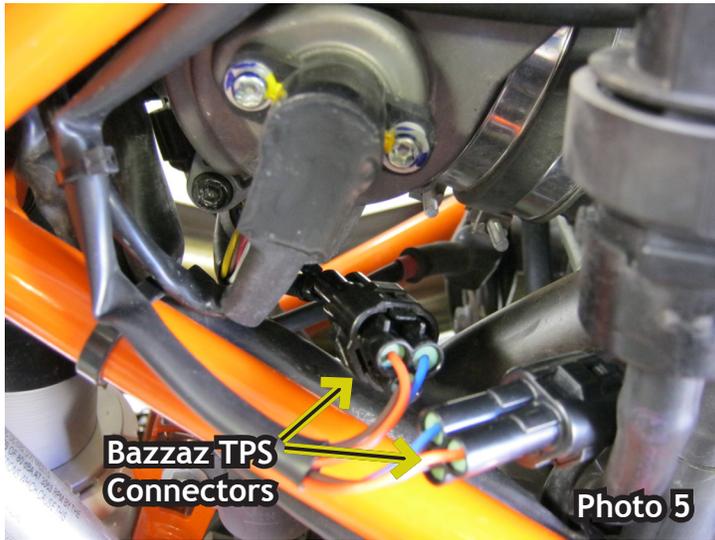

4. Identify the injector connector which can be found at the top of the throttle body assembly. Disconnect the factory harness connector and install the mating Bazzaz harness injector connectors inline (photo 3).

5. Locate the emissions valve mounted to the right frame rail. Disconnect the factory harness connector from the valve and install the mating Bazzaz harness power connectors inline (photo 4).

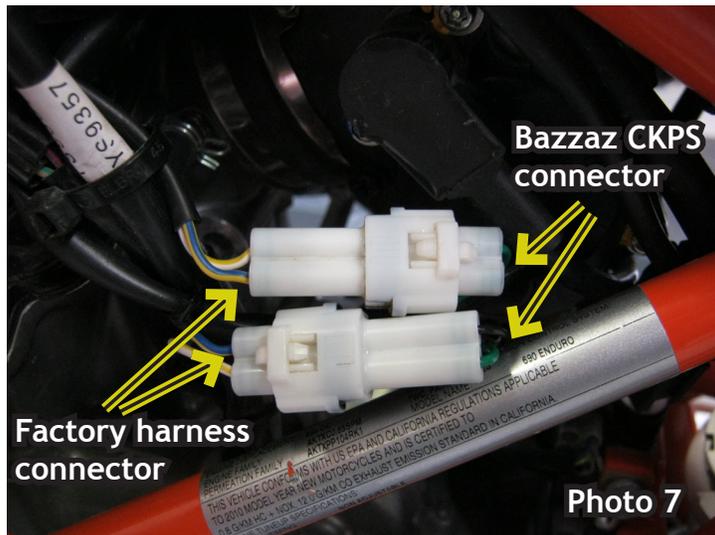

6. Disconnect the factory harness throttle position sensor connectors from the sensor and install the mating Bazzaz harness connectors inline (photo 5).

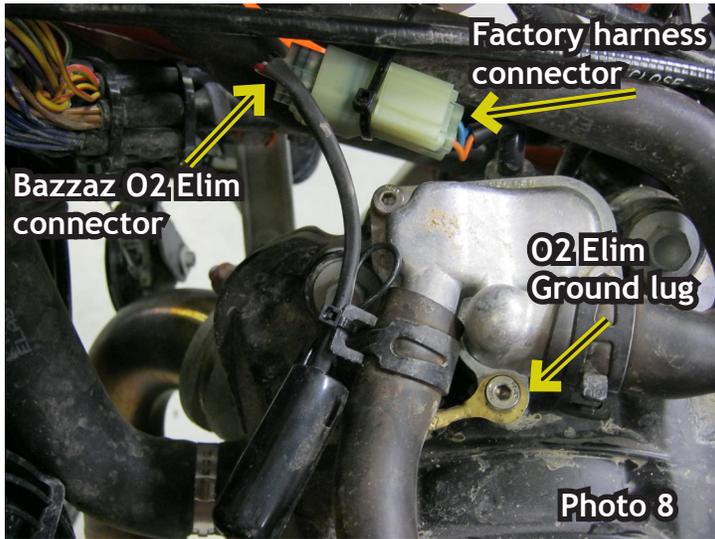

7. Attach the ground lug lead of the Bazzaz harness to a solid chassis or engine ground (photo 6).

8. Route the remaining lead of the Bazzaz harness containing the crank position connectors to the left side of the engine. Disconnect the factory crank position sensor connectors from one another and connect the mating Bazzaz connectors inline (photo 7).

9. The 690 Enduro is equipped with a lambda/O₂ sensor. The sensor must be bi-passed through the use of a O₂ eliminator supplied with the kit. Disconnect the factory harness from the sensor. Install the Bazzaz O₂ eliminator in place of the factory sensor connector and attach the O₂ eliminator ground lug to a chassis ground. Be sure to secure the eliminator and factory sensor lead away from any hot or moving components which could cause damage (photo 8).

10. Now that the installation is complete, take a moment to secure the Bazzaz harness along its routing path with the supplied cable ties. Reinstall the components removed in step one of these instructions.

The Bazzaz controller is capable of storing two maps. These maps can be selected through the use of a map select switch which can be mounted on the handlebar for easy access and can be purchased separately. Or these maps can be selected by connecting or disconnecting the map select jumper supplied with the kit. When the map select jumper is connected the control unit is operating using map 1. When the map select jumper is disconnected the control unit is operating using map 2.
